My Website: <https://BelalEdoor.github.io/MyWebsite>

I am a software engineer specializing in web development and scalable digital solutions. I am currently studying Computer Systems Engineering at Palestine Polytechnic University, with a GPA of 4.0.

I completed a professional training in front-end user interface development, with a particular focus on React.js, and have practical experience using the following programming languages: Java, HTML, CSS, JavaScript, React, Tailwind CSS, Python, and IoT. Throughout my academic and personal career, I have developed numerous impactful projects that demonstrate my ability to solve complex problems, write clear and efficient code, and deliver high-quality user experiences.

## Technical Skills

**Web Development:** HTML, CSS (tailwind css), JavaScript, React (Context API).

**Programming Language:** C++, Java , Python ,sql .

**Soft Skills:** Data Structures, Algorithms, Problem Solving, OOP .

**Tools:** Git, GitHub, VS Code, FireBase.

## Languages

\_English – Intermediate | Arabic - Native.

## Training courses

**Front-End Development Training (react.js) – PPU (Code Academy)** 9 March 2024 – 30 June 2024

I completed an intensive hands-on training focused on building modern, responsive web applications using React.js and Tailwind CSS. I applied service design principles to create scalable front-end systems and worked on real-world projects both individually and in groups, improving my teamwork and problem-solving skills.

**Front-End Developer Training - Udacity Platform** 15 Oct 2024 - 21 March 2025

I completed hands-on training in core front-end technologies such as HTML, CSS, JavaScript, SCSS, and Webpack, gaining experience in modular programming, component-based architecture, and best practices. The program also included using Node.js and Express.js to build back-end services, enabling me to develop and deploy fully integrated projects with mentor feedback.

**LLM & NLP training | Gaza Sky Geeks** 18 june 2025 – present

I am currently participating in a training program specializing in natural language processing (NLP) and large language models (LLMs). The training covers key topics such as text analysis, language model engineering, and real-world AI applications. Through practical projects and case studies, I gain practical experience in effectively applying these concepts in real-world situations.

## Projects

**Address Book**

Developed using Java and object-oriented programming principles, such as interfaces, inheritance, and polymorphism. The project features a graphical user interface (GUI).

**Smart Driving**

An Internet of Things (IoT) project to control a car over the internet using an ESP32 microcontroller, joystick, and an Arduino Cloud platform for connecting components.

**E-Commerce Store**

An online store built with React that displays categorized products, supports search and filtering, and allows users to add products to their cart or favorites. It offers a responsive and easy-to-use user interface, with real-time interactions and integration with local storage.

**Capstone Travel App**

An integrated project that combines multiple APIs to provide real-time weather, location, and trip information, providing users with an interactive and dynamic travel planning experience.

**Scientific Library**

The Scientific Research Library is a digital platform committed to advancing knowledge by providing easy access to high-quality scientific publications, research papers, and educational resources..

**DentalHub Platform**

DentalHub Platform is a digital system for managing dental clinics, offering tools for appointments, patient records, and communication. It enhances workflow efficiency and improves patient experience.
